

## Summary 17/06/2022

- Finalized AI checkpoint and completing Jupyter notebooks for the checkpoint
- Research and learning about how to adapt RNN and Long Short-Term Memory Cells for the trajectory generation algorithm
- Meeting with ESP team to oversee progress:
  - o Not much progress due to lack of time and Voltron project interference
  - o Continue to prepare for sprint review of next week
  - o Test development – AI neural network test
- Quick meeting with Voltron team:
  - o To finalize type of data to have as input and to generate with the algorithm chosen.
  - o Start drilling with the algorithms to be adapted to the case study
